An Abrasive Jet Cutter is a CNC-based cold-cutting system that uses an ultra-high-pressure stream of water combined with abrasive media to generate a high-energy erosive jet for cutting metals, stone, glass, ceramics, composites, and other hard, heat-sensitive, or thick-section materials. Typical product forms include bridge, gantry, cantilever, enclosed compact, bevel/5-axis, and robotic-integrated systems. A complete machine normally combines a high-pressure pump, cutting head, abrasive delivery unit, motion platform, CNC control, and process software. The core value proposition of this equipment lies in no heat-affected zone, broad material compatibility, complex contour capability, and strong fit with high-mix, low-volume, precision, and value-added manufacturing environments.
