Abrasive waterjet nozzles also known as mixing tubes are mainly installed in water jet cutting machines, they can cut materials such as metal, ceramic, stone, glass and other materials. They are particularly wear-resistant. In particular, when the water is compressed to 42,000 psi and sprayed out of the nozzle, the water can easily cut inch thick metal by using the 42,000 psi water jet laced with a garnet abrasive as described above.
