The research report highlights the growth potential of the global ABS Plastics market. ABS Plastics are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of ABS Plastics. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the ABS Plastics market.

ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure.

Currently, global production of ABS is relatively scattered as there are many

manufacturers engaged in the industry. The largest manufacturers LG Chem, Formosa, CHIMEI, CNPC, Lotte Chemical, INEOS Styrolution, Toray, SABIC, JSR, Dagu Chemical, etc. and the top ten players account above 60% revenue market share in the world.
