The global Absorbable Biofilm market size is predicted to grow from US\$ 1068 million in 2025 to US\$ 1636 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Absorbable Biofilm refers to thin sheet or thin layer medical functional materials made from natural or synthetic biodegradable materials such as collagen, gelatin, chitosan, hyaluronic acid, polylactic acid, polycaprolactone and poly lactic co glycolic acid. These films provide temporary barriers, tissue support, wound protection, controlled drug release or regenerative repair in contact with human tissue, and are gradually degraded and absorbed through hydrolysis, enzymatic degradation or tissue metabolism after fulfilling their intended function. Typical applications include postoperative adhesion prevention, guided tissue regeneration, dental repair, soft tissue repair, wound care and regenerative medicine. Absorbable Biofilms typically cost several hundred dollars each, with a gross profit margin of 30% to 50%.

The upstream supply chain of Absorbable Biofilm mainly includes natural polymers, synthetic biodegradable polymers, bioactive ingredients, crosslinking agents, solvents, sterile packaging materials and suppliers of precision coating, casting, lyophilization, electrospinning and sterilization equipment. Midstream manufacturers are responsible for formulation development, film forming, pore structure control, degradation profile adjustment, biocompatibility validation, aseptic manufacturing and regulatory submission. Downstream customers mainly include surgical consumables companies, dental repair material manufacturers, orthopedic and soft tissue repair device companies, wound care companies, regenerative medicine companies, as well as hospitals, dental clinics and specialty surgical centers.

The Absorbable Biofilm market is evolving from conventional surgical barrier materials toward high performance regenerative and repair materials. Demand is mainly driven by

the wider adoption of minimally invasive surgery, postoperative adhesion management, dental and orthopedic repair, wound healing and regenerative medicine. As clinical users place greater emphasis on material safety, controllable degradation and tissue compatibility, competition is shifting from basic barrier performance to material engineering, multifunctionality, bioactivity and clinical validation. The market is expected to feature faster replacement by premium products, broader application scenarios and higher technical barriers among leading manufacturers.
