The global Absorbable Collagen Sutures market size is predicted to grow from US\$ 360 million in 2025 to US\$ 514 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Absorbable collagen sutures are natural absorbable surgical sutures made from high-purity type I collagen extracted from animal sources (such as bovine or porcine tendons or intestinal membranes). After implantation, they gradually degrade and are absorbed by tissues within 7–21 days through enzymatic hydrolysis. They possess good biocompatibility, low immunogenicity, and certain hemostatic and tissue repair-promoting functions. They are mainly used in delicate suturing scenarios such as ophthalmology, oral and periodontal surgery, plastic surgery, and gynecology, where tissue reactions are sensitive. The upstream of the industry chain includes suppliers of medical-grade collagen raw materials and manufacturers of spinning and twisting equipment. The midstream consists of biomaterial companies with Class III medical device registration certificates, which need to master collagen purification, fiber forming, cross-linking modification (to improve strength/extend absorption time), and aseptic encapsulation technologies. The downstream mainly targets surgical departments in specialized hospitals, entering clinical settings through distributors or direct sales. In 2024, the global production of absorbable collagen sutures was approximately 2.5 million pieces, with a global average market price of approximately US\$140 per piece. The gross profit margin of major companies in the industry is between 30% and 50%, and the single-line production capacity is 500,000 to 1,200,000 units per year.

United States market for Absorbable Collagen Sutures is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Absorbable Collagen Sutures is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
