The Absorbable Cranial Fixation Device is a medical device used to fix skull flaps or repair skull fractures. Unlike traditional metal fixation devices, the Absorbable Cranial Fixation Device is made of bioresorbable materials that can gradually degrade and absorb in the body, so there is no need for a secondary surgery to remove it. This device is widely used in neurosurgery, especially in pediatric patients, because their bones are still developing, and the use of absorbable materials can reduce the impact on growth.

The global Absorbable Cranial Fixation Device market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
