The Absorbable Drug-Eluting Coronary Stent System is an innovative medical device designed to treat coronary artery disease, especially for the recanalization of narrowed or blocked blood vessels. Unlike traditional metal drug-eluting stents, BVS can be gradually absorbed by the human body after completing its supporting function, restoring the natural state and elasticity of the blood vessels. This stent is made of biocompatible materials such as polylactic acid, and releases anti-proliferative drugs within a few months after implantation to prevent restenosis of the blood vessels.
