Absorbable Fixation System for Hernia Repair refers to a type of medical device used to secure a surgical mesh over a hernia defect, which gradually dissolves and is absorbed by the body over time. These systems are typically made from materials like synthetic polymers (e.g., polylactic acid, polyglycolic acid, or polydioxanone) or natural polymers (e.g., collagen). The absorbable nature of these devices means they provide temporary support to the mesh and the surrounding tissue during the critical initial healing period, after which they break down and are metabolized by the body, reducing the risk of long-term complications and eliminating the need for a second surgery to remove the fixation device. Absorbable fixation systems can come in various forms, including sutures, tacks, staples, and adhesives, and are used in both open and laparoscopic hernia repair surgeries.

The global Absorbable Fixation System for Hernia Repair market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
