The global Absorbable Interface Screw market size is predicted to grow from US\$ 3912 million in 2025 to US\$ 6003 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

When used for internal fixation, it can be absorbed by tissue, eliminating the need for secondary removal surgery, thus reducing the risk of wound infection in patients; in addition, compared with traditional stainless steel or titanium alloy products, absorbable screws will not interfere with magnetic images and affect the patient. CT and nuclear magnetic examination results, so it has a good prospect of medical application.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
