Absorbable ligating clips for vascular tissue closure are medical devices used to secure and close blood vessels or other tissues during surgical procedures. Made from biocompatible and absorbable materials, these clips are designed to degrade naturally in the body over time, eliminating the need for removal. They are commonly used in minimally invasive surgeries, such as laparoscopy, and provide reliable hemostasis while reducing the risk of infection or long-term complications. The absorbable nature of these clips makes them a convenient and effective alternative to traditional non-absorbable ligating methods.
