The research report highlights the growth potential of the global Absorbable Modified Polymer market. Absorbable Modified Polymer are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Absorbable Modified Polymer. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Absorbable Modified Polymer market. A hemostatic powder composed of hydrophilic, absorbable modified polymers (AMPs) derived from plant starch, with potential anti-hemorrhagic activity. Upon local administration of the AMP hemostatic powder directly sprayed over the bleeding surface, this powder adheres to the bleeding area, and the AMPs are able to absorb fluid and therefore soak up blood at the bleeding site.

With the continuous advancement of medical technology, absorbable modified polymers have gradually garnered attention within the medical field. This material possesses biodegradability, allowing it to gradually break down and be absorbed by the body, eliminating the need for secondary surgeries to remove the material and reducing patient discomfort and recovery time. Absorbable modified polymers find widespread application in areas such as sutures, stents, tissue repairs, with particularly notable performance in surgical procedures. In recent years, heightened focus on health and well-being has raised the standards for medical materials, contributing to the promising

market outlook for absorbable modified polymers.
