According to our LPI (LP Information) latest study, the global Absorbable Polymer Stents market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Absorbable Polymer Stents is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Absorbable Polymer Stents market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Absorbable Polymer Stents are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Absorbable Polymer Stents. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Absorbable Polymer Stents market.

According to material classification, absorbable scaffolds are mainly divided into two categories: absorbable polymer scaffolds and absorbable metal scaffolds. The former is mainly composed of L-poly(lactic acid) (PLLA), while the latter includes three types: magnesium alloy, iron alloy, and zinc alloy. Absorbable polymer scaffolds were the earliest to be commercialized, so there are many companies both domestically and internationally choosing this route. However, the mechanical properties of poly(lactic acid) are much lower than those of metal materials. To maintain sufficient support, it is necessary to make the scaffold thicker, the trabeculae wider, and the vascular coverage higher. Obstructing stent endothelialization, activating platelets, and promoting

thrombosis, with limited specifications and inconvenient operation.
