Absorbable skull fixation screws can be used for instrument-free skull fixation applications. It is a two-sided fixation system that can be used to fix the skull during craniotomy. A special wire-chain mechanism enables device-free operation. The implants are made of absorbable polyester, a standard material for absorbable materials used in neurosurgery. The absorbable screws can maintain 90-95% of their initial strength 8-12 weeks after implantation and can be fully absorbed and metabolized 2-3 years after implantation. The absorbable skull screws are stable and can be used in both adult and pediatric patients. The product is provided in sterile packaging and can be used without any additional equipment.
