According to our LPI (LP Information) latest study, the global AC Asynchronous Motors market size was valued at US\$ million in 2023. With growing demand in downstream market, the AC Asynchronous Motors is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global AC Asynchronous Motors market. AC Asynchronous Motors are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of AC Asynchronous Motors. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the AC Asynchronous Motors market.

An induction motor or asynchronous motor is an AC electric motor in which the electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor can therefore be made without electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type.

Global induction motor market is primarily driven by the rising demand for electric vehicles, technological advancement, and the rapid rate of industrialization in emerging countries. There is a tremendous pressure on countries at a global forefront to cut the greenhouse gases emission. For this, they are promoting electric vehicles globally. Industrial application is the leading segment in terms of revenue in the global induction

motor market.
