The AC/DC off-line transfer switch is a power conversion technology used to convert alternating current power (AC) to direct current power (DC). Off-line conversion refers to the separation of the power supply from the AC grid, thereby ensuring the safety of personnel and the reliability of electrical equipment. The AC/DC off-line conversion switch realizes the rectification, filtering and voltage stabilization of the AC power supply

by using the switch control of power electronic devices (such as diodes, MOSFETs, IGBTs, etc.), so as to obtain a stable DC power output. The AC/DC off-line transfer switch has the advantages of high efficiency, good reliability, and small size, and is widely used in various electronic equipment, such as computers, communication equipment, household appliances, LED lighting, etc.
