Abstracts

The global AC Dehydrator for Oil and Gas market size is predicted to grow from US\$ 1019 million in 2025 to US\$ 1994 million in 2032; it is expected to grow at a CAGR of 10.2% from 2026 to 2032.

The global gross margin for AC dehydrators for oil and gas is projected to be approximately 36.59% in 2025. AC dehydrators for oil and gas are used to remove water from crude oil, especially high-water-content crude oil. Their working principle involves using an electric field to cause fine water droplets in the crude oil to aggregate and settle, reducing the water content to meet transportation standards or refining requirements. They are primarily used for dehydrating produced crude oil from oil fields, and are particularly suitable for crude oil with high water content. They are applicable to the export of low- to mid-range crude oil and petroleum refining. Electrostatic dehydration equipment is highly efficient at removing water from high-water-content crude oil (10–30% water content, or even higher), reducing the water content to
