AC Electromagnetic Brakes are braking devices that use alternating current (AC) to generate an electromagnetic field for engaging or releasing a brake mechanism. When AC power is supplied to the brake coil, the resulting magnetic force activates a brake pad or disc that slows or stops the motion of a rotating shaft. These brakes are widely used in industrial machinery, elevators, cranes, and electric motors where precise stopping and holding are required.

United States market for AC Electromagnetic Brakes is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
