AC metal closed ring network switch cabinet is a kind of power distribution equipment used in high-voltage power systems. It is widely used in power distribution, substations, urban power grids and other places. Its main function is to control and protect power lines and ensure the reliability of power supply through ring network design. In the ring network power supply system, when a part fails, it can quickly switch to the backup power supply to ensure uninterrupted power supply. The metal-enclosed structure provides higher safety, can effectively prevent risks such as electrical fires and explosions, and reduce the danger to operators. The equipment is usually used for voltage levels of 36kV and above, can withstand high current loads, and has protection functions such as load switches and circuit breakers. Modern metal closed ring network switchgear also integrates intelligent monitoring and automatic control functions to realize remote operation and fault diagnosis, further improving the stability and automation level of the power system.

United States market for AC Metal Closed Ring Network Switch Cabinet is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
