The global AC Power Plugs market size is predicted to grow from US\$ 3504 million in 2025 to US\$ 4182 million in 2032; it is expected to grow at a CAGR of 2.8% from 2026 to 2032.

In 2025, global AC Power Plugs production reached approximately 710 million units with an average global market price of around US\$ 5 per unit, and a gross profit margin of approximately 10%-20%. AC Power Plugs are standardized electrical connector components used to create a safe, detachable connection between an AC power source and an electrical load. A plug is typically attached to a power cord or portable equipment and carries pins or blades that mate with the contacts inside a receptacle (socket-outlet), which is usually fixed to a wall, panel, power distribution unit, extension cord, or equipment enclosure. Together, they deliver AC electricity at specified voltage and current ratings while incorporating design features for safety and reliability, such as grounding and polarization, finger-safe contact geometry, insulation and flame-retardant materials, mechanical retention/locking options, and defined insertion/withdrawal life. The category spans residential and commercial wiring devices (e.g., NEMA, Schuko, BS, GB types) as well as industrial heavy-duty systems (e.g., IEC 60309) that may add keyed configurations to prevent mismating, robust housings, and environmental protection ratings (IP/IK) for outdoor or harsh-duty use.

According to the National Bureau of Statistics, in 2022, China's power generation was 8.8 trillion kWh, with a year-on-year increase of 3.7%. And the top three power generation methods were thermal power, hydropower and wind power. The per capita electricity consumption of residents was 947 kW. In 2022, China's installed power generation capacity were about 2.56 billion kilowatts, with a year-on-year increase of 7.8%. The utilization hours of power generation equipment in power plants of 6,000 kilowatts and above in the country were 3,687 hours, with a decrease of 125 hours over the same period of the previous year. The investment in power supply engineering

construction of major power generation enterprises reached 720.8 billion yuan, with a year-on-year increase of 22.8%. The investment in power grid engineering construction reached 501.2 billion yuan, with a year-on-year increase of 2.0%. According to data released by the International Energy Agency, the global economy gradually recovered in 2022. With the influence of the rising energy prices, the global electricity demand in 2022 was 26,776 billion kWh, which increased 1.9% year-on-year. The generating capacity was 28,642 billion kWh, with the increase of 1.8% year-on-year. Among them, the United States generated 42.4 billion kWh of electricity in 2022, and Japan's total electricity consumption was 989.2 billion kWh, with the 7782 kWh per capita.
