AC RF filter is a filter used to process AC signals. It can selectively pass or attenuate different frequency components according to the frequency of the signal. The main applications of AC RF filters are: used in power line communications to transmit data signals through power lines. Used in radio receivers to suppress image frequencies and other interfering signals and improve signal-to-noise ratio. Used in radio transmitters to suppress harmonics and spurious signals and reduce interference to adjacent frequency bands. Used for signal modulation and demodulation to achieve signal transformation and recovery.
