The global AC Snubber Capacitor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

AC snubber capacitor is an electronic component used in AC circuits. It is usually used for power filtering, reducing AC voltage peaks, and improving the stability of the power system. Its function is to provide temporary charge storage and release functions in AC circuits to smooth voltage fluctuations and maintain circuit stability. AC buffer capacitors usually use electrolytic capacitors or porcelain capacitors. Electrolytic capacitors have large capacitance and are suitable for high current applications, but have low voltage resistance and polarity; while porcelain capacitors have high voltage resistance and stability, but have small capacitance and are usually used for high frequency or small current applications. AC buffer capacitors can be classified and selected according to their capacitance, withstand voltage, operating frequency, size and other parameters to meet the needs of different circuits. AC snubber capacitors are usually widely used in power supply filtering and conversion of DC power to AC power.
