The global AC Wet and Dry Vacuum Cleaner Motors market size is predicted to grow from US\$ 664 million in 2025 to US\$ 885 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

An AC wet and dry vacuum cleaner motor is a specialized AC drive motor designed for wet/dry vacuum cleaners. It drives a high-speed impeller to generate negative pressure airflow, enabling the suction and collection of dust, particles, liquids, water stains, and mixed contaminants. Compared to ordinary dry vacuum cleaner motors, this type of motor not only needs to possess stronger suction and airflow but must also meet requirements for moisture resistance, waterproofing, corrosion resistance, and long-term continuous operation to adapt to working environments that handle both liquid and solid impurities simultaneously.

The upstream of the industry chain mainly includes suppliers of raw materials and components such as silicon steel sheets, enameled wire, copper materials, carbon brushes, commutators, bearings, engineering plastics, aluminum alloy die castings, and sealing materials. It also involves manufacturers of stamping equipment, winding equipment, dynamic balancing equipment, and automated assembly equipment. The midstream consists of manufacturers of AC wet/dry vacuum cleaner motors, producing series motors, bypass motors, and multi-stage vacuum motors through processes such as stator and rotor machining, winding, commutator assembly, impeller system integration, waterproof sealing design, and complete machine testing. The downstream mainly applies to household vacuum cleaners, commercial vacuum cleaners, and industrial vacuum cleaners.

In 2025, global sales of AC wet and dry vacuum cleaner motors reached 32 million

units, with a production capacity of approximately 45 million units. The average selling price was US\$21.2 per unit, and the average gross profit margin was 20%-30%.

Global environmental regulations, occupational health and safety standards, and industrial cleaning requirements are driving the continued growth of the professional cleaning equipment market. In Europe and the United States, increasingly stringent requirements for industrial dust control, occupational safety protection, and environmental emission management are prompting the upgrading of industrial vacuum cleaners. Simultaneously, rising hygiene and cleaning standards in commercial properties, medical institutions, and public places are also driving demand for commercial wet and dry vacuum cleaners. In recent years, the construction, automotive detailing, and manufacturing maintenance markets have continued to expand, creating a stable demand base for AC wet and dry vacuum cleaner motors.
