The global Acceleration Logger market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An Acceleration Logger is a device or system that records and measures the acceleration of an object or device.

It is a device that combines an acceleration sensor and a data logging function to measure and record acceleration. The latest products are capable of measuring acceleration up to 400G, and are now mostly compact and lightweight.

This makes it possible to measure the acceleration of rotating objects, the human body, and small animals, which have been difficult to measure in the past. In addition, they support high-speed sampling and are equipped with a large-capacity memory, which broadens the range of measurement.

United States market for Acceleration Logger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Acceleration Logger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Acceleration Logger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
