An accelerator card is an extension card that is used in high-performance computing, cloud servers, and data centers to accelerate various workloads. These cards can be plugged in via a PCIe slot and are programmable, allowing the user to instruct the card to perform various tasks. These cards are more efficient as compared to general-purpose microprocessors. Some of the widely used accelerator cards in high-performance computing, and data centers are CPUs and GPUs. FPGAs and ASICs are also being used to accelerate machine learning applications in data centers.

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology. The steady growth of application demand and the accelerated development

of the new energy vehicle market can offset the decline in some consumer markets and provide support for long-term demand growth.
