The global Accelerator Mass Spectrometer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An Accelerator Mass Spectrometer (AMS) is an advanced analytical instrument used in radiocarbon dating and other isotopic analysis applications. Unlike traditional mass spectrometers, which measure the mass-to-charge ratio of ions, AMS accelerates ions to high velocities using a particle accelerator before subjecting them to mass analysis. This acceleration allows AMS to analyze isotopic ratios with extremely high sensitivity and precision, even for rare isotopes present in very small quantities. In radiocarbon dating, AMS enables the precise determination of the ratio of carbon-14 to carbon-12 in samples, allowing scientists to accurately estimate the age of organic materials thousands to millions of years old. Additionally, AMS is used in environmental research, archaeology, geology, and forensic science to study isotopic compositions and trace elements in various materials, providing valuable insights into past environments, human history, and geological processes.

United States market for Accelerator Mass Spectrometer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
