The global Accelerator Mass Spectrometry (AMS) Service market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Accelerator Mass Spectrometry (AMS) service is a specialized analytical technique used for radiocarbon dating and isotopic analysis of samples with extremely low concentrations of isotopes. Unlike conventional mass spectrometry, AMS can accurately measure isotopic ratios at trace levels by accelerating ions to high energies using a particle accelerator. This allows for the precise determination of isotopic abundances and the detection of isotopes at concentrations as low as parts per trillion. AMS service providers offer expertise and instrumentation for radiocarbon dating of archaeological artifacts, geological samples, and environmental materials, as well as isotopic analysis for studies in fields such as geoscience, archaeology, anthropology, and environmental science. AMS services enable researchers to obtain accurate and reliable data on the age and composition of samples, contributing to a better understanding of past environments, human history, and natural processes.

United States market for Accelerator Mass Spectrometry (AMS) Service is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
