The global AC/DC High Voltage Divider market size is predicted to grow from US\$ 271 million in 2025 to US\$ 372 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

The AC/DC high voltage divider is a general-purpose high-voltage measuring instrument used to measure power frequency AC high voltage and DC high voltage. It has the advantages of high precision, good anti-interference performance, safety and reliability, simple operation, and easy portability. The high-voltage part and the low-voltage instrument are separated during operation, and it is the first choice to replace the high-voltage electrostatic voltmeter.

The upstream segment primarily focuses on high-performance precision electronic components and insulating materials, including ultra-high stability low-temperature coefficient resistors, high-voltage capacitors, and sulfur hexafluoride gas.

The price of AC/DC high-voltage dividers depends on factors such as voltage level, accuracy, and brand, with market prices ranging from \$900 to \$1500 per set. Global sales are projected to reach 240,000 sets in 2025, with industry gross margins in the 25%-40% range.

With the application of 800V and higher voltage DC architectures, the demand for real-time, high-linearity voltage dividers is continuously increasing, making them indispensable components in power electronics systems. Simultaneously, the transformation of power supply for computing infrastructure has become an emerging driving force, with giants like Nvidia and Microsoft fully implementing high-voltage DC distribution architectures. This is forcing voltage dividers at the grid end and data center

side to rapidly evolve towards higher power density, miniaturization, and faster response speeds.
