The global Acetylene Gas market size is predicted to grow from US$ 5998 million in 2025 to US$ 7297 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Acetylene gas is a highly flammable gaseous hydrocarbon with the formula C2H2. It is a colorless and tasteless gas with a garlic-like odor. Acetylene gas is a very unstable compound and decomposes with ignition within a wide range of pressures and temperatures, for this reason, acetylene is shipped as a stabilized solution under pressure and dissolved in acetone.

Acetylene gas is one of the fuel gases used in oxy-fuel gas welding, which is any welding procedure that combines a fuel gas with oxygen to produce a flame. The heat and temperature produced by an acetylene flame depend upon the amount of oxygen used to burn it. Air-acetylene gas produces a flame temperature of around 4000° F (2200° C). When acetylene gas is burned in pure oxygen, the flame temperature may be as high as 5730° F (3166° C).

Global Acetylene Gas key players include Linde, Sichuan Vinylon, Jinhong Gas, etc. Global top three manufacturers hold a share over 20%.

China is the largest market, with a share over 35%, followed by Europe, and North America, both have a share about 40 percent.

In terms of product, Hydrocarbon Pyrolysis Method is the largest segment, with a share over 50%. And in terms of application, the largest application is Chemical, followed by Cutting and Welding, etc.
