The global ACF Filter market size is predicted to grow from US\$ 108 million in 2025 to US\$ 143 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

The ACF (Activated Carbon Fiber) filter cartridge is a depth filter that utilizes high-performance activated carbon fibers as its filtration medium. By leveraging a fibrous structure to provide an immense specific surface area, it efficiently adsorbs residual chlorine, odors, organic matter, and heavy metal ions present in water. Compared to traditional granular activated carbon, it offers distinct advantages such as rapid adsorption rates, high dirt-holding capacity, and a reduced risk of carbon fines leakage; consequently, it is widely employed in water purifiers for decolorization, odor removal, and fine filtration.

The upstream segment of the ACF filter cartridge industry chain primarily encompasses fiber precursors, spinning processes, carbonization and activation techniques, and associated equipment. Among these, precursors for activated carbon fibers are predominantly derived from materials such as PAN (polyacrylonitrile), pitch, and viscose/rayon. The midstream segment involves the further processing of activated carbon fibers into various media?including fabrics, felts, papers, and sheets?which are then fabricated into filter elements such as cylindrical or pleated cartridges. The downstream segment focuses on high value-added adsorption and purification applications, primarily targeting drinking water purification, industrial liquid decolorization, deodorization, and dechlorination, indoor air purification, the adsorption and recovery of VOCs and organic solvents, odor control, and specific industrial purification processes.

The pricing of ACF filter cartridges varies depending on factors such as length, filtration precision, and intended application. Industrial-grade cartridges ranging from 10 to 40 inches in length typically retail for between USD 11 and USD 150 per unit. The

industry's gross profit margin currently stands at approximately 30%.

United States market for ACF Filter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
