The global Acid-Based Silage Additives market size is predicted to grow from US\$ 321 million in 2025 to US\$ 499 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

An acid-based silage additive is a type of additive that is used to preserve forage crops, such as grass, corn, and alfalfa, by promoting a rapid fermentation process. The additive works by lowering the pH of the forage, which inhibits the growth of spoilage organisms and promotes the growth of lactic acid bacteria.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
