Acid Grade Fluorspar Concentrate refers to a high-purity calcium fluoride (CaF_2) product obtained through beneficiation of fluorite ore, typically containing at least 97% CaF_2 with very low levels of impurities such as silica, carbonates, and phosphorus. It serves as the primary raw material for the production of hydrofluoric acid (HF), which is a critical upstream input for a wide range of fluorochemical industries, including refrigerants, fluoropolymers (such as PTFE), lithium-ion battery electrolytes, semiconductor etching chemicals, and aluminum smelting processes. Due to its strategic importance in energy, electronics, and defense-related supply chains, acid grade fluorspar concentrate is considered a critical mineral, with production highly concentrated and requiring advanced beneficiation technology to meet stringent industrial specifications. In 2025, global Acid Grade Fluorspar Concentrate production reached approximately 5 million tons, average price \$600 / ton, with gross margin 20%.

United States market for Acid Grade Fluorspar Concentrate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
