Acid Reflux Suspension is a liquid oral pharmaceutical preparation formulated to relieve symptoms associated with acid reflux, heartburn, and related upper gastrointestinal discomfort. It is generally designed as a suspension containing active ingredients that may neutralize gastric acid, form a protective barrier over the stomach or esophageal lining, or reduce acid-related irritation depending on the formulation. The suspension format allows the active ingredients to be evenly dispersed in a liquid medium for oral administration. The product is mainly used for occasional heartburn, acid indigestion, reflux symptoms, and related digestive discomfort. The product scope covers finished oral suspension medicines for acid reflux and excludes solid tablets, capsules, and injectable products.

The industry chain begins upstream with active pharmaceutical ingredients, antacid materials, suspending agents, emulsifiers, sweeteners, flavors, preservatives, purified water, and pharmaceutical packaging materials. Midstream manufacturers conduct raw-
