The global Acid Soaping Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

An acid soaping agent is a product used in the textile industry for the cleaning and treatment of dyed fabrics. It is specifically designed to remove excess dyes, impurities, and residues that may be present on the fabric after the dyeing process. Acid soaping agents are typically formulated with acidic components that help to solubilize and remove these unwanted substances.

The primary function of an acid soaping agent is to enhance the color fastness and overall appearance of dyed fabrics. After the dyeing process, the fabric may contain residual dyes that have not properly bonded to the fibers or impurities that have accumulated during the dyeing process. These residues can affect the color brilliance, fastness properties, and overall quality of the fabric.
