ACM Panels consist of two aluminum sheets bonded to a core material, typically made of polyethylene (PE) or fire-retardant (FR) mineral-filled core. These boards offer a combination of strength, rigidity, and low weight, making them suitable for a wide range of applications. Construction and Architecture: The construction industry is a significant driver of the aluminum sandwich board market. Aluminum sandwich boards are widely used in building facades, cladding, roofing, and signage applications. Their lightweight nature makes them easy to handle and install, while their durability and resistance to weather and UV radiation contribute to their popularity. Additionally, their aesthetic appeal and ability to be customized with various finishes and colors further drive their adoption in architectural projects.
