Acoustic mesh for consumer electronics is a precision protective material designed for smartphones, TWS headphones, smart watches and other devices. It is made of polyester (PET), nylon (PA) or electrospun nanofibers (such as polyimide PI). It achieves dust and water resistance (IP67/IP68 level) through a high porosity structure while maintaining high sound wave transmittance. Typical application scenarios include mobile phone speakers, microphone openings and acoustic components of wearable devices; the global market size of acoustic mesh for consumer electronics is expected to be approximately US\$210 million in 2024, mainly driven by the increase in the cost of acoustic mesh for 5G terminals (approximately US\$5-15 per unit), the shipment of TWS headphones exceeding 400 million units (0.2-0.5 pieces per headphone), and the accelerated replacement of international brands such as SAATI by Chinese manufacturers (such as Changzhou Jiexi) (the localization rate will reach 40% in 2024). The market will maintain a compound growth rate of more than 20% in the next three years and is expected to exceed US\$250 million in 2025.
