The global Acousto-Optic Multi-Channel Modulators (AOMC) market size is predicted to grow from US$ 145 million in 2025 to US$ 268 million in 2031; it is expected to grow at a CAGR of 10.8% from 2025 to 2031.

An acousto-optic multi-channel modulator (AOMC) operates on the same principles as a typical acousto-optic (AO) modulator, but is fabricated using an array of electrodes on the transducer substrate so that a parallel array of beams can be simultaneously controlled. A different acoustic wave diffracts each input beam independently to modulate its intensity or to deflect a portion of the beam into the 1st order mode.

Rising Demand for High-Speed Optical Communication: AOMCs play a vital role in high-speed optical communication systems, enabling modulation and control of multiple channels simultaneously. As the demand for high-speed data transmission increases, the need for AOMCs also grows.

Optical Signal Processing and Routing: AOMCs are crucial in optical signal processing applications, including routing and switching, where multiple optical channels need to be modulated and controlled for efficient signal management.

Laser Printing and Marking Applications: In laser printing and marking systems, AOMCs are utilized to modulate laser beams for precise printing and marking on various materials. The growth of these applications contributes to the demand for AOMCs.

Growth in Lidar Applications: Lidar technology, used in various applications like

autonomous vehicles, environmental monitoring, and more, utilizes AOMCs for beam steering and modulation. The expanding lidar market contributes to the demand for AOMCs.
