The global Activated Carbon Fabric market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Activated carbon fabric, also known as activated charcoal fabric, is a specialized material that has been treated with activated carbon particles to enhance its adsorption and filtration capabilities. Activated carbon is a highly porous form of carbon with a large surface area, which makes it effective at trapping and removing various gases, liquids, and impurities from the surrounding environment. When activated carbon is integrated into fabric, it creates a textile material with enhanced adsorption properties.

Activated carbon fabric continued to be widely used in air and water purification applications. Growing concerns about air quality and water contamination drove the demand for effective filtration solutions.
