Activated carbon fiber filter is a high-efficiency filter made of activated carbon fiber material, which is widely used in air purification, water treatment and industrial waste gas treatment. Activated carbon fiber is a material with high specific surface area and a large number of microporous structures, which can effectively adsorb and remove harmful gases, odors, heavy metals and organic pollutants in the air or water. Compared with traditional granular activated carbon filter elements, activated carbon fiber filter elements have faster adsorption speed and higher adsorption capacity, which makes it particularly good in treating high-concentration pollutants and requiring rapid purification.

The global Activated Carbon Fiber Filter Element market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
