According to this study, the global Active Antennas market size will reach US\$ million by 2031.

Active antenna refers to an antenna equipped with an RF preamplifier or low noise amplifier in the antenna, which integrates a receiving antenna module, a low noise amplifier module, and a power supply module. It must be used by the receiver board or receiving module. Feeding, the signal amplifier in it can only work under the power supply state; different active antennas have different requirements for the feed voltage, and it is necessary to select the appropriate feed voltage according to the parameters of the antenna. The function of the active antenna is to convert the electromagnetic wave energy of the radio signal from the base station into the electric current that can be picked up by the receiver electronics.
