The global Active Bromine Fungicide market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Active bromine fungicide is a broad-spectrum and highly effective industrial fungicide that can quickly penetrate the cell membrane of microorganisms and act on certain protein groups to stop the normal redox of cells, thereby causing cell death. At the same time, its branches can also selectively bromine or oxidize the special enzyme metabolites of microorganisms, ultimately leading to the death of microorganisms. Active bromine fungicide has good stripping properties, no foam when used, can be miscible with water in any ratio, low toxicity, and can be quickly decomposed in an aqueous environment. Active bromine fungicide has the advantages of fast sterilization speed, low corrosion to metals, convenient continuous addition and automatic control in liquid form, stable operation, and no irritating odor. Active bromine fungicide makes up for the shortcomings of existing chlorine-containing oxidizing fungicides and is currently an ideal fungicide for industrial and domestic water disinfection.
