The global Active Contact Force Control System market size is predicted to grow from US\$ 373 million in 2025 to US\$ 538 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

The active contact force control system is a high-tech technology developed to meet the precise needs of surface treatment of objects in the field of industrial automation. It can achieve precise closed-loop control, automatically follow the changes in the surface of the object to elastically expand and contract, and ensure that the force between the contact surface remains constant, thereby improving the quality and efficiency of the grinding and polishing process. The system integrates force sensing and pressure-maintaining actuators, which can achieve precise pressure maintenance and fast pressure response without changing the robot's trajectory, overcoming the problems of slow response speed and insufficient precision in traditional robot grinding and polishing applications. The application of active contact force control technology can not only improve product processing quality and reduce production costs, but also improve the working environment of workers and reduce the risk of occupational diseases. It provides an effective solution for automation system integrators and meets the needs of industrial development for high-precision surface treatment of objects.
