Active Direct Attach Cables (Active DAC) are high-speed, short-reach data communication cables used to interconnect networking and computing equipment within data centers and high-performance computing environments. These cables utilize active components at both ends to enhance signal quality, extend reach, and support high-speed data transmission.

Key features and aspects of Active Direct Attach Cables include:

**Active Components:** Active DAC cables have integrated active components, including semiconductor-based electronics, to condition and boost signals. These components help to improve signal integrity and compensate for signal degradation, allowing for

longer cable lengths.

**Enhanced Signal Quality:** The active components in the cable enhance the signal quality, reducing errors and ensuring reliable and high-speed data transmission.

**Extended Reach:** Active DAC cables can support longer distances compared to passive DAC cables. The active components compensate for signal loss, enabling the cables to reach farther within a data center.

**High-Speed Data Transmission:** Active DAC cables support a wide range of high-speed data transmission rates, including 10Gbps, 25Gbps, 40Gbps, 100Gbps, and beyond, depending on the specific cable and networking standards.

**Plug-and-Play Installation:** They are designed for easy installation and use, providing a plug-and-play solution for quick deployment and connectivity between networking devices.

**Compatibility and Interoperability:** Active DAC cables are compatible with a variety of networking equipment, adhering to industry-standard interfaces and ensuring interoperability across different devices.

**Cost-Effective Solution:** Active DAC cables offer a cost-effective alternative to optical transceivers and fiber-optic cabling for short to medium distances. They provide high-speed connectivity at a lower cost.

Active Direct Attach Cables find extensive use in data centers, server farms, and other networking environments where high-speed, short-distance connections are required. They are particularly suitable for connecting switches, routers, servers, and storage devices within the same rack or adjacent racks, providing efficient and reliable data transmission.
