Ready-to-use reactive ink for the organic solar cell industry. Infinitypv has developed a thorough scientific understanding of active material design and ink development through extensive research on OPV large-scale processing. This has led to the development of reactive layer materials called production inks (PI) that are optimized for processing technology and technical requirements in large-scale roll-to-roll (R2R) manufacturing. In addition, an understanding of the subtle interplay between ink, processing, mechanical and solar cell characteristics has been generated and it is now possible to offer R2R-compatible inks to our customers.
