The global Active Liquid Cooling System for Data Center market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Active Liquid Cooling System for a data center is a specialized thermal management solution designed to efficiently dissipate the heat generated by high-performance computing equipment, such as servers, CPUs, and GPUs. Unlike traditional air-based cooling methods, which rely on fans and chilled air, ALCS uses a liquid (typically water or dielectric fluids) to absorb and transfer heat away from heat-generating components directly. This allows for more effective cooling, especially in environments with high computing density. In Active Liquid Cooling System for data centers, key components typically include the Coolant Distribution Unit (CDU), Loops, and cold plates.
