The global Active and Passive Vacuum Gauge Controller market size is predicted to grow from US$ 116 million in 2025 to US$ 149 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

The Active and Passive Vacuum Gauge Controller is a precision instrument designed for monitoring and regulating the pressure within a vacuum system, automatically controlling the operation of vacuum pumps or solenoid valves to maintain a constant level of vacuum as per the set values. This controller typically operates in two modes: active and passive. In the active mode, the controller contains an internal power supply and signal amplifier, allowing it to actively output signals or directly drive actuators; whereas in the passive mode, it relies on external power and signals for signal transmission and switching. The built-in sensor of the controller accurately measures the vacuum level and displays the current pressure value on an intuitive screen. Additionally, its various interfaces and communication protocols enable easy integration with computers or other control systems for automated control. Designed for durability and reliability, the Active and Passive Vacuum Gauge Controller operates stably in harsh environments, ensuring the safe operation of the vacuum system.

United States market for Active and Passive Vacuum Gauge Controller is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
