Active noise control headphones reduce unwanted ambient sounds using active noise control. This is distinct from passive headphones which, if they reduce ambient sounds at all, use techniques such as soundproofing. Active noise cancellation makes it possible to listen to audio content without raising the volume excessively. It can also help a passenger sleep in a noisy vehicle such as an airliner. In the aviation environment, active noise-control headphones increase the signal-to-noise ratio significantly more than passive noise attenuating headphones or no headphones, making hearing important information such as safety announcements easier. Active noise-control headphones can improve listening enough to completely offset the effect of a distracting concurrent activity.

The global market for Active Noise Control Headphones is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Active Noise Control Headphones market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Active Noise Control Headphones market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Active Noise Control Headphones market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Active Noise Control Headphones market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
