## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Active noise reduction wearable heart rate variability detection device refers to the slight difference between successive cardiac cycles, reflecting the continuous instantaneous fluctuation of heart rate, and heart rate fluctuation is not accidental, but the regulation of internal nerves and body fluids, in order to adapt to different physiological conditions or certain pathological conditions inside and outside the body. In response to stress, HRV is a non-invasive indicator of the activity of the autonomic nervous system and its balance. The HRV of healthy people is large and complex, and the HRV of disease or stress is significantly lower.

The global Active Noise Reduction Wearable Heart Rate Variability Detection Device market size is projected to grow from US\$ 480.5 million in 2023 to US\$ 642.3 million in 2030; it is expected to grow at a CAGR of 4.2% from 2024 to 2030.
