The global Active RFID Tags market size is predicted to grow from US\$ 4315 million in 2025 to US\$ 6946 million in 2031; it is expected to grow at a CAGR of 8.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report focus on Active RFID Tags market. Active RFID systems use battery-powered RFID tags that continuously broadcast their own signal. Active RFID tags are commonly used as “beacons” to accurately track the real-time location of assets or in high-speed environments such as tolling. Active tags provide a much longer read range than passive tags, but they are also much more expensive.

There are two main frequencies used by active systems – 433 MHz and 915 MHz. User preference, tag selection, or environmental considerations usually dictate which frequency to use for most applications. Companies generally favor RFID systems that operate on the 433 MHz because it has a longer wavelength enabling it to work a little better with non-RF friendly materials like metal and water.
