Abstracts

The global Active Roll Control System market size is predicted to grow from US\$ 626 million in 2025 to US\$ 1306 million in 2032; it is expected to grow at a CAGR of 11.1% from 2026 to 2032.

Active Roll Control System refers to a vehicle chassis system that actively generates counter-roll torque through dedicated anti-roll bar actuators to suppress body roll during cornering while allowing greater suspension independence and ride comfort during straight-line driving. A typical system uses split front and/or rear anti-roll bars connected by electromechanical or hydraulic/electrohydraulic actuators, together with electronic control units, sensors, reduction mechanisms, hydraulic components where applicable, and associated power and communication interfaces. The research scope focuses on systems in which the active stabilizer bar itself generates controllable anti-roll torque at the axle. Electromechanical configurations increasingly operate on 48V electrical architectures, while hydraulic and electrohydraulic configurations use controlled hydraulic pressure to vary stabilizing torque. Key technical parameters include maximum stabilizing torque, response time, actuator power, operating voltage, control accuracy, packaging, energy consumption and durability. The technology is primarily applied to premium passenger cars, performance vehicles, SUVs and electrified platforms requiring a broader balance between ride comfort and lateral body control. ZF currently positions electromechanical roll control for mid-range and premium vehicles, including hybrid and electric drivetrains.

Key Findings

48V electromechanical systems have become the principal technology direction in new premium vehicle platforms

Premium SUVs and performance vehicles remain the core commercial application base

Maximum active anti-roll torque has reached around 1,400 Nm per axle in current production applications

Market Trends

The Active Roll Control market is transitioning from hydraulically actuated stabilization toward electromechanical systems integrated with 48V electrical architectures. This technology shift is driven by faster response, reduced hydraulic complexity, improved energy efficiency and easier integration with electronically controlled chassis systems. Schaeffler has developed 48V mechatronic active roll control, while ZF's electromechanical roll control directly generates stabilization torque through an electrical actuator; JLR's Dynamic Response Pro similarly uses a 48V electronic system capable of applying up to 1,400 Nm per axle. Product development is also becoming more software-defined: actuator torque is increasingly coordinated with steering, damping, air suspension, rear-wheel steering and drive-mode control rather than operating as an isolated chassis function. Electrification supports this direction because high-capacity low-voltage or vehicle high-voltage electrical systems can supply active chassis actuators more efficiently. Porsche has already applied electromechanical active roll stabilization on 48V architectures and, on selected hybrid platforms, integrated PDCC into the vehicle high-voltage system. The long-term direction is therefore toward faster electromechanical actuation, more integrated chassis control and broader application beyond traditional flagship luxury vehicles.

Market Dynamics

Drivers

The primary market driver is growing demand for simultaneously improved ride comfort and handling stability in premium vehicles and SUVs. Higher vehicle mass, higher centers of gravity and stronger acceleration performance increase lateral body-control requirements, particularly in large SUVs and electrified vehicles. Active roll control addresses this conflict by generating stabilizing torque during cornering while reducing the need for permanently stiff passive anti-roll bars during straight-line driving. ZF explicitly positions its ERC technology as a means of combining dynamic driving, road safety and ride comfort, while JLR's 48V Dynamic Response Pro is designed to control roll torque independently across the axles. The expansion of 48V electrical systems

further improves the feasibility of high-power electromechanical actuators, supporting broader adoption in premium ICE, hybrid and electric platforms. Based on the established market model, global system shipments increased from roughly 380 thousand units in 2025 to an estimated 425 thousand units in 2026, reflecting both model proliferation and rising fitment within high-end platforms.

Restraints

Active roll control remains substantially more expensive and complex than conventional passive stabilizer bars. Electromechanical systems require electric motors, reduction mechanisms, control electronics, sensors and reinforced structural interfaces, while hydraulic systems require pumps, valves, lines and pressure-control components. The additional mass and packaging requirements are also non-trivial; Schaeffler notes that an electromechanical active roll control assembly can weigh up to approximately 14 kilograms and reach around 1.4 meters in length, illustrating the manufacturing and packaging complexity of the system. Because the technology delivers greatest value in vehicles with high performance, high mass or strong ride-comfort positioning, economic penetration remains concentrated in premium segments. Moreover, alternative chassis technologies such as fully active dampers can provide roll-control functions without conventional active anti-roll bars, creating substitution pressure on some next-generation platforms; Porsche's current Active Ride system, for example, can perform anti-roll stabilization through active dampers without traditional anti-roll bars.

Opportunities

The largest opportunity lies in extending active roll control from flagship luxury vehicles into a broader range of premium SUVs, electric vehicles and performance-oriented models. Electromechanical systems are especially well positioned because 48V architectures reduce electrical current and power losses compared with lower-voltage actuation while eliminating many hydraulic components. Schaeffler's 48V development and ZF's positioning of ERC for mid-range as well as premium vehicles indicate the technical potential for wider vehicle-class coverage. Electrification creates an additional opportunity because battery-electric vehicles combine high curb weight with strong acceleration and high expectations for ride refinement, making active body control particularly relevant. Integration with air suspension, continuously controlled damping, rear-wheel steering and centralized chassis software can also increase system value. Suppliers able to provide the actuator, transmission mechanism, electronic control and vehicle-dynamics calibration as an integrated module are positioned to capture greater value than suppliers focused only on mechanical anti-roll bar components.

Challenges

The principal challenge is maintaining a clear performance and cost advantage as active suspension technologies become more capable. Active roll bars must deliver high torque within very short response times while meeting stringent automotive durability, noise, vibration, packaging and functional-safety requirements. Current production systems already operate at demanding performance levels: JLR specifies up to 1,400 Nm per axle, while Porsche electromechanical PDCC can react within roughly 200 milliseconds. At the same time, manufacturers must coordinate roll-control torque with damping, steering, braking and powertrain systems without producing unnatural vehicle responses. System suppliers therefore require advanced electromechanical engineering, control algorithms and vehicle-level calibration capabilities. Another strategic challenge is technology substitution: fully active dampers and integrated active-suspension architectures can progressively absorb anti-roll functionality, so future active roll bar adoption will depend on whether the technology offers the best balance of performance, energy consumption, packaging and cost for a specific vehicle platform.

Industry Chain Analysis

The upstream industry chain includes high-strength spring steel and stabilizer-bar materials, electric motors, permanent magnets, gears and planetary reduction components, bearings, power electronics, sensors, ECUs, seals and structural housings. Hydraulic variants additionally require pumps, valves, hydraulic fluid, pressure lines and rotary hydraulic actuators. In electromechanical products, the actuator and reduction mechanism are the key value-creating components because they must generate substantial bidirectional torque rapidly within limited installation space while meeting chassis-level durability requirements. Electronic control and sensor interfaces are also increasingly important as active roll control becomes integrated into broader vehicle-motion-control platforms.

Midstream suppliers undertake anti-roll bar forming and heat treatment, actuator and gearbox manufacturing, electronic-control integration, system assembly, calibration and validation. Downstream customers are principally premium passenger-car and SUV OEMs, with fitment concentrated in platforms emphasizing handling, comfort and advanced chassis control. The system's value is increasingly shifting from the stabilizer bar as a mechanical component toward the complete mechatronic module, including actuator, reduction mechanism, electronic control and calibration. Schaeffler's volume-production electromechanical active roll control and ZF's current ERC platform illustrate

this evolution toward system-level supply.

Segment Insights

From a technology perspective, electromechanical active roll control has become the principal development direction and accounts for the majority of current new-platform opportunities. The 48V route is particularly important because it offers sufficient electrical power for rapid high-torque actuation while remaining compatible with vehicle low-voltage architecture. Schaeffler's eARC and JLR's Dynamic Response Pro demonstrate this configuration, while Porsche has also used 48V electromechanical anti-roll bars in production vehicles. Hydraulic and electrohydraulic systems retain applications in existing architectures and selected vehicle programs, but their relative importance is declining as OEMs prioritize simplified electrical integration, response speed and efficiency.

From an application perspective, premium SUVs represent one of the most attractive segments because their higher center of gravity and substantial curb weight create greater roll-control demand, while customers also expect high ride comfort. Performance passenger cars form another important segment, where active roll control can improve cornering stability without relying on excessively stiff passive suspension settings. Electrified vehicles are becoming increasingly important because battery mass increases the value of active body control. Based on the established shipment model, global fitment remains a niche relative to total vehicle production, but the approximately 380 thousand systems estimated for 2025 and roughly 425 thousand systems estimated for 2026 indicate a market moving beyond limited flagship applications toward broader premium-platform adoption.

Downstream Market Opportunities

The most attractive downstream opportunities are concentrated in premium SUVs, performance sedans and coupes, luxury electric vehicles and high-performance hybrid platforms. These applications combine high vehicle mass, strong acceleration, increasingly sophisticated air or adaptive suspension and high customer expectations for both ride comfort and body control. JLR currently uses 48V active roll control in Range Rover and Range Rover Sport, while Porsche continues to offer active roll stabilization across selected Cayenne and 911 applications. The next phase of opportunity is likely to come from premium vehicles positioned below traditional flagship models as actuator cost declines and 48V architectures become more common. Integration with centralized vehicle-motion control also creates opportunities for

suppliers to expand from hardware supply into control software, calibration and complete chassis-system engineering.

Regional Insights

Europe remains the most technologically influential region for Active Roll Control, supported by a high concentration of premium and performance vehicle manufacturers and established chassis-system suppliers. Current production applications from Porsche, Range Rover and other European premium platforms demonstrate strong regional adoption of electromechanical active anti-roll technologies, while ZF and Schaeffler provide established actuator and system capabilities. North America represents an important consumption market through premium SUVs and performance vehicles, although much of the underlying system engineering is linked to global vehicle platforms. China is becoming increasingly relevant as domestic premium new-energy vehicle manufacturers invest in advanced chassis technologies and seek differentiation through ride comfort and vehicle dynamics, creating a potential localization opportunity for active roll-control components and complete systems.

Regional market development will depend heavily on premium-vehicle mix rather than total automotive production alone. Unlike mass-market chassis components, active roll control is currently concentrated in vehicles where consumers are willing to pay for advanced ride and handling technologies. Consequently, Europe's premium-vehicle engineering ecosystem provides it with an outsized role in technology development, while China offers the strongest potential for incremental platform expansion if locally produced premium electric SUVs adopt active anti-roll systems more broadly. North America remains strategically attractive because large premium SUVs represent an important portion of the high-value vehicle market.

Competitive Landscape Analysis

The Active Roll Control market is characterized by relatively high technical barriers and a limited group of suppliers capable of delivering production-ready mechatronic systems. Within the confirmed supplier framework, ZF and Schaeffler are important established participants in electromechanical active roll control. ZF's ERC directly creates stabilization torque through an electrical actuator and is positioned for mid-range, premium, hybrid and electric vehicles, while Schaeffler has been producing electromechanical active roll control at volume since 2015 and has developed 48V mechatronic solutions. Competitive differentiation increasingly depends on actuator torque density, response speed, NVH performance, packaging, energy efficiency,

functional safety and integration with chassis-control software rather than the stabilizer bar itself. OEM-specific calibration and long-term platform relationships also create significant entry barriers. The market is therefore evolving toward competition among complete mechatronic chassis-system capabilities, while the emergence of fully active suspension introduces a parallel technology path that may influence long-term active roll bar penetration.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Active Roll Control System Industry Forecast” looks at past sales and reviews total world Active Roll Control System sales in 2025, providing a comprehensive analysis by region and market sector of projected Active Roll Control System sales for 2026 through 2032. With Active Roll Control System sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Active Roll Control System industry.

This Insight Report provides a comprehensive analysis of the global Active Roll Control System landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Active Roll Control System portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Active Roll Control System market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Active Roll Control System and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Active Roll Control System.

This report presents a comprehensive overview, market shares, and growth opportunities of Active Roll Control System market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Hydraulic

Electromechanical

Segmentation by Voltage:

48V

800V

Segmentation by Application:

Gasoline Vehicles

New Energy Vehicles

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analysing the company's coverage, product portfolio, its market penetration.

Schaeffler

ZF Friedrichshafen

AISIN

KH Automotive Technologies

Zhiwei Technology

Key Questions Addressed in this Report

What is the 10-year outlook for the global Active Roll Control System market?

What factors are driving Active Roll Control System market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Active Roll Control System market opportunities vary by end market size?

How does Active Roll Control System break out by Type, by Application?

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

- 2.1 World Market Overview
 - 2.1.1 Global Active Roll Control System Annual Sales 2021-2032
 - 2.1.2 World Current & Future Analysis for Active Roll Control System by Geographic Region, 2021, 2025 & 2032
 - 2.1.3 World Current & Future Analysis for Active Roll Control System by Country/Region, 2021, 2025 & 2032
- 2.2 Active Roll Control System Segment by Type
 - 2.2.1 Hydraulic
 - 2.2.2 Electromechanical
 - 2.2.3 Active Roll Control System Sales by Type
 - 2.2.3.1 Global Active Roll Control System Sales Market Share by Type (2021-2026)
 - 2.2.3.2 Global Active Roll Control System Revenue and Market Share by Type (2021-2026)
 - 2.2.3.3 Global Active Roll Control System Sale Price by Type (2021-2026)
- 2.3 Active Roll Control System Segment by Voltage
 - 2.3.1 48V
 - 2.3.2 800V
 - 2.3.3 Active Roll Control System Sales by Voltage
 - 2.3.3.1 Global Active Roll Control System Sales Market Share by Voltage (2021-2026)
 - 2.3.3.2 Global Active Roll Control System Revenue and Market Share by Voltage (2021-2026)
 - 2.3.3.3 Global Active Roll Control System Sale Price by Voltage (2021-2026)
- 2.4 Active Roll Control System Segment by Application

- 2.4.1 Gasoline Vehicles
- 2.4.2 New Energy Vehicles
- 2.4.3 Active Roll Control System Sales by Application
 - 2.4.3.1 Global Active Roll Control System Sale Market Share by Application (2021-2026)
 - 2.4.3.2 Global Active Roll Control System Revenue and Market Share by Application (2021-2026)
 - 2.4.3.3 Global Active Roll Control System Sale Price by Application (2021-2026)

3 GLOBAL BY COMPANY

- 3.1 Global Active Roll Control System Breakdown Data by Company
 - 3.1.1 Global Active Roll Control System Annual Sales by Company (2021-2026)
 - 3.1.2 Global Active Roll Control System Sales Market Share by Company (2021-2026)
- 3.2 Global Active Roll Control System Annual Revenue by Company (2021-2026)
 - 3.2.1 Global Active Roll Control System Revenue by Company (2021-2026)
 - 3.2.2 Global Active Roll Control System Revenue Market Share by Company (2021-2026)
- 3.3 Global Active Roll Control System Sale Price by Company
- 3.4 Key Manufacturers Active Roll Control System Producing Area Distribution, Sales Area, Product Type
 - 3.4.1 Key Manufacturers Active Roll Control System Product Location Distribution
 - 3.4.2 Players Active Roll Control System Products Offered
- 3.5 Market Concentration Rate Analysis
 - 3.5.1 Competition Landscape Analysis
 - 3.5.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)
- 3.6 New Products and Potential Entrants
- 3.7 Market M&A Activity & Strategy

4 WORLD HISTORIC REVIEW FOR ACTIVE ROLL CONTROL SYSTEM BY GEOGRAPHIC REGION

- 4.1 World Historic Active Roll Control System Market Size by Geographic Region (2021-2026)
 - 4.1.1 Global Active Roll Control System Annual Sales by Geographic Region (2021-2026)
 - 4.1.2 Global Active Roll Control System Annual Revenue by Geographic Region (2021-2026)
- 4.2 World Historic Active Roll Control System Market Size by Country/Region

(2021-2026)

4.2.1 Global Active Roll Control System Annual Sales by Country/Region (2021-2026)

4.2.2 Global Active Roll Control System Annual Revenue by Country/Region

(2021-2026)

4.3 Americas Active Roll Control System Sales Growth

4.4 APAC Active Roll Control System Sales Growth

4.5 Europe Active Roll Control System Sales Growth

4.6 Middle East & Africa Active Roll Control System Sales Growth

5 AMERICAS

5.1 Americas Active Roll Control System Sales by Country

5.1.1 Americas Active Roll Control System Sales by Country (2021-2026)

5.1.2 Americas Active Roll Control System Revenue by Country (2021-2026)

5.2 Americas Active Roll Control System Sales by Type (2021-2026)

5.3 Americas Active Roll Control System Sales by Application (2021-2026)

5.4 United States

5.5 Canada

5.6 Mexico

5.7 Brazil

6 APAC

6.1 APAC Active Roll Control System Sales by Region

6.1.1 APAC Active Roll Control System Sales by Region (2021-2026)

6.1.2 APAC Active Roll Control System Revenue by Region (2021-2026)

6.2 APAC Active Roll Control System Sales by Type (2021-2026)

6.3 APAC Active Roll Control System Sales by Application (2021-2026)

6.4 China

6.5 Japan

6.6 South Korea

6.7 Southeast Asia

6.8 India

6.9 Australia

6.10 China Taiwan

7 EUROPE

7.1 Europe Active Roll Control System by Country

- 7.1.1 Europe Active Roll Control System Sales by Country (2021-2026)
- 7.1.2 Europe Active Roll Control System Revenue by Country (2021-2026)
- 7.2 Europe Active Roll Control System Sales by Type (2021-2026)
- 7.3 Europe Active Roll Control System Sales by Application (2021-2026)
- 7.4 Germany
- 7.5 France
- 7.6 UK
- 7.7 Italy
- 7.8 Russia

8 MIDDLE EAST & AFRICA

- 8.1 Middle East & Africa Active Roll Control System by Country
 - 8.1.1 Middle East & Africa Active Roll Control System Sales by Country (2021-2026)
 - 8.1.2 Middle East & Africa Active Roll Control System Revenue by Country (2021-2026)
- 8.2 Middle East & Africa Active Roll Control System Sales by Type (2021-2026)
- 8.3 Middle East & Africa Active Roll Control System Sales by Application (2021-2026)
- 8.4 Egypt
- 8.5 South Africa
- 8.6 Israel
- 8.7 Turkey
- 8.8 GCC Countries

9 MARKET DRIVERS, CHALLENGES AND TRENDS

- 9.1 Market Drivers & Growth Opportunities
- 9.2 Market Challenges & Risks
- 9.3 Industry Trends

10 MANUFACTURING COST STRUCTURE ANALYSIS

- 10.1 Raw Material and Suppliers
- 10.2 Manufacturing Cost Structure Analysis of Active Roll Control System
- 10.3 Manufacturing Process Analysis of Active Roll Control System
- 10.4 Industry Chain Structure of Active Roll Control System

11 MARKETING, DISTRIBUTORS AND CUSTOMER

11.1 Sales Channel

11.1.1 Direct Channels

11.1.2 Indirect Channels

11.2 Active Roll Control System Distributors

11.3 Active Roll Control System Customer

12 WORLD FORECAST REVIEW FOR ACTIVE ROLL CONTROL SYSTEM BY GEOGRAPHIC REGION

12.1 Global Active Roll Control System Market Size Forecast by Region

12.1.1 Global Active Roll Control System Forecast by Region (2027-2032)

12.1.2 Global Active Roll Control System Annual Revenue Forecast by Region (2027-2032)

12.2 Americas Forecast by Country (2027-2032)

12.3 APAC Forecast by Region (2027-2032)

12.4 Europe Forecast by Country (2027-2032)

12.5 Middle East & Africa Forecast by Country (2027-2032)

12.6 Global Active Roll Control System Forecast by Type (2027-2032)

12.7 Global Active Roll Control System Forecast by Application (2027-2032)

13 KEY PLAYERS ANALYSIS

13.1 Schaeffler

13.1.1 Schaeffler Company Information

13.1.2 Schaeffler Active Roll Control System Product Portfolios and Specifications

13.1.3 Schaeffler Active Roll Control System Sales, Revenue, Price and Gross Margin (2021-2026)

13.1.4 Schaeffler Main Business Overview

13.1.5 Schaeffler Latest Developments

13.2 ZF Friedrichshafen

13.2.1 ZF Friedrichshafen Company Information

13.2.2 ZF Friedrichshafen Active Roll Control System Product Portfolios and Specifications

13.2.3 ZF Friedrichshafen Active Roll Control System Sales, Revenue, Price and Gross Margin (2021-2026)

13.2.4 ZF Friedrichshafen Main Business Overview

13.2.5 ZF Friedrichshafen Latest Developments

13.3 AISIN

13.3.1 AISIN Company Information

- 13.3.2 AISIN Active Roll Control System Product Portfolios and Specifications
- 13.3.3 AISIN Active Roll Control System Sales, Revenue, Price and Gross Margin (2021-2026)
- 13.3.4 AISIN Main Business Overview
- 13.3.5 AISIN Latest Developments
- 13.4 KH Automotive Technologies
 - 13.4.1 KH Automotive Technologies Company Information
 - 13.4.2 KH Automotive Technologies Active Roll Control System Product Portfolios and Specifications
 - 13.4.3 KH Automotive Technologies Active Roll Control System Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.4.4 KH Automotive Technologies Main Business Overview
 - 13.4.5 KH Automotive Technologies Latest Developments
- 13.5 Zhiwei Technology
 - 13.5.1 Zhiwei Technology Company Information
 - 13.5.2 Zhiwei Technology Active Roll Control System Product Portfolios and Specifications
 - 13.5.3 Zhiwei Technology Active Roll Control System Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.5.4 Zhiwei Technology Main Business Overview
 - 13.5.5 Zhiwei Technology Latest Developments
