Active Temperature Controlled Air Containers are specialized air cargo containers equipped with built-in systems (such as compressors, heaters, and sensors) that actively regulate and maintain a precise internal temperature throughout transit. Unlike passive containers that rely on insulation and pre-conditioning, active containers use powered refrigeration or heating units to ensure stable temperatures regardless of external conditions. These containers are critical for transporting temperature-sensitive goods like pharmaceuticals, biologics, perishable foods, and high-value chemicals. They often offer real-time monitoring, battery backup, and compliance with international cold chain standards to ensure product safety and integrity during air transport.

United States market for Active Temperature Controlled Air Containers is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
